

**9. Railing**  
Cut the lid of the oatmeal container to make a nice railing. It's worth trying ideas like this and it worked out well in this example. For railing on the sides and back, cut and glue black straws along the edge.

**10. Windows and doors**  
Windows are 1" square. Single doors are 3/4" wide x 1.5" tall and double doors are 1.5" x 1.5" with rounded tops and a score down the middle. For windows and doors along the curved parts, bend the cardboard, paint glue on and place. Add masking tape and let dry.

**11. Paint and details**  
Start painting, you will need more than one coat and some touching up. Cut toothpicks for door handles and glue in place. The back end of a brush can help adjust placement. Let dry before painting in metallic color of your choice.

**12. Final touches**  
The HTU sign is from 2 layers of corrugated cardboard.

**13. Happy Tree University**  
Happy Tree village now has a center for higher education. Who knows, maybe students at HTU are making Happy Tree villages of their own in those tiny classrooms!
